

PROVANCE

Provance® Bar Code for Microsoft® System Center

IT Asset Management (ITAM) programs are only as effective as the accuracy of the asset database and the processes that surround it, including Install, Move, Add, Change and Dispose (IMACD) processes. Complete, current and accurate IT asset data is required to make informed, cost-saving decisions. Provance® Bar Code for Microsoft® System Center 2012 / 2016 compliments the Provance IT Asset Management Pack with integrated bar code scanning to optimize your ITAM processes throughout the entire asset life cycle without any customization or integration required.

Improve accuracy and timeliness of asset data and reduce cost when receiving assets, or performing inventory and IMACD processes. Provance Bar Code allows organizations to leverage asset information directly from the CMDB, and update it remotely. Track the physical location of IT assets from servers, PC's, blades to non-IP aware assets such as chassis and racks in the data center with a simple point and shoot. The portable Bar Code Scanner allows field personnel to verify or update asset information on the fly, such as location, life cycle status and assigned user.

FEATURES

Integrated with the Provance®
IT Asset Management Pack for Microsoft
System Center 2012 / 2016

Reduces Audit Time and Cost

Increases Inventory Accuracy

Updates the asset CMDB over Wi-Fi or
Wireless Carrier

TAKE CONTROL OF IT INVENTORY

Get the Provance® Bar Code for Microsoft® System Center

Extend Data Sources

IT asset information changes all the time. Provance Bar Code for System Center minimizes the time spent capturing data by replacing manual processes and spreadsheet data entry. Simplify the maintenance of IT asset data by empowering field personnel with real-time data maintenance.

Reduce Audit Time and Complexity AND Increase Accuracy

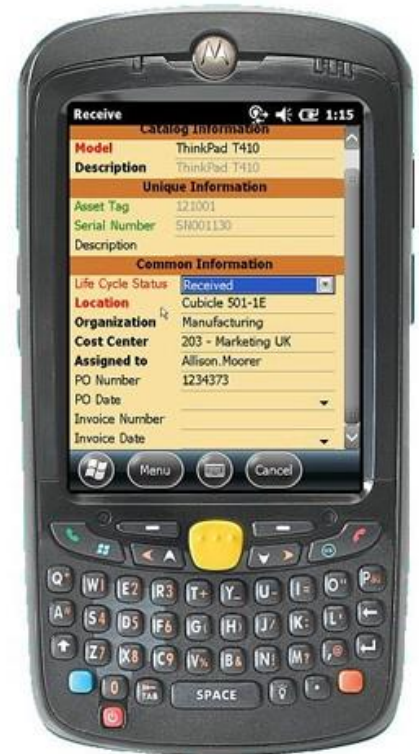

No more pens and paper or transcription errors - simply prepare inventory reports and then scan the assets and confirm their location and assignment information. Field audits are now as simple as point and shoot, with asset moves or reallocations updated in real time.

Integration with your IMACD Process

Scan asset tags or the manufacturer's serial numbers to view and update any properties on the form, creating a history record in Service Manager every time an item is updated. Assets that are not found in the CMDB can be easily added with only a few entries and clicks.

Reduce the Time and Effort to Receive Assets

Enter common asset properties once, and scan each asset's tag or serial number for fast and accurate entry directly into the Provance IT Asset Management Pack and the Service Manager CMDB. Update the CMDB as inventory changes happen, with synchronization over Wi-Fi, wireless carrier or through the scanner cradle.

Get the Provance Bar Code for System Center Service Manager and take control of IT inventory.

Provance Barcode Scanner Requirements:

Provance Bar Code requires a Windows Mobile 5 or 6 device capable of running an Internet Explorer compatible browser with TCP/IP wireless access and ability to run Symbol or Intermec scanner, as well as Microsoft ActiveSync or Windows Mobile Device Center on the desktop to install the Provance scanner application and components.
